

ENERGY CONSERVATION

In view of the high costs for heating and lighting for the foreseeable future, it is the policy of the School Committee that all reasonable efforts to reduce energy costs in the school shall be undertaken under the direction of the superintendent. A dynamic and continuing energy conservation program, within the appropriate health and safety requirements, wherein lights are turned off in unoccupied rooms, thermostats are lowered, and windows are kept closed, shall include principals, plant manager, staff, and students. Awareness of the importance of conservation shall be encouraged at all levels.
